Općina Vareš

About us

- Euro-MaxLine d.o.o. Sarajevo is established in 2005, in 2012. the company is reorganized into business entity for employment of disabled persons.
- Core activity of Euro-MaxLine is the production of equipment for beekeeping from wood. A company employs craftsmen, specialists to carpentry.
- 20% from the total number of employees are healthy people, while the remaining 80% are people with disabilities who are in the past retrained to the masters and auxiliary masters in wood processing.
- With the help of the Fund for Professional Rehabilitation we purchased the machines and other needs for production. The product is perfected to the maximum and a small part is sold on the domestic market.
- We export in Albania, Croatia, Serbia and Montenegro, and we are in process of opening office in Germany

Our products

*Euro-MaxLine
LR košnica*

- Euro-MaxLine has perfected a large range of products required for beekeeping but we are working hard every day on new products.

Apiary

- Regardless of the virtually guaranteed sales on domestic and foreign markets, the best and most cost-effective placement for our product would be for our own apiaries, or apiaries of potential investors.
- For this reason, Euro-MaxLine is seeking investors to start apiaries in the project "Bosnia land of honey" counting on the exceptional amount of natural resources suitable for beekeeping.
- We expect investors to invest into apiaries, while we would employ our professionals to take care of those apiaries.
- If we consider exceptional demand for bee products, like royal jelly, pollen, propolis, honey and young swarms, investor would in a very short time returned his stake, but also very quickly began making exceptional profit.

Plans for future

- With current and new activities Euro-MaxLine would in the future period hired a large number of young professionals, particularly returnees and people with disabilities.
- We also want to thank for the exceptional support from Municipality of Vares where we would open Regional bee center, and the Faculty of Agriculture in Sarajevo which would educate new experts, and in that way participated in our project "Bosnia land of honey"
